

CABLE MODEM/ROUTER WITH WIRELESS-N QUICK START

This Quick Start description is specific to the Cable Modem/Router with Wireless-N. A cable modem service is an Internet service for computers where other host devices in the home (tablets, phones, smart phones, etc.) receive information about network status, such as the user's bandwidth (C/S).

Package Contents

- Cable Modem/Router
- Power cord
- Ethernet LAN cable
- CD with user manual

Before installing Your Cable Modem

The cable modem/router needs to know your modem's MAC ADDRESS, which is a unique address on the system of government. This information is used to identify cable modem services. If you already have a cable modem, you can identify the cable company (C/S) by looking at the modem. You may also be asked to provide the modem's model name and number, which is a **MODEL#**. If you need the modem's serial number, you can find it from the MAC address on the modem label.

System Requirements

- The modem/Router for cable modem use cable modem service that uses one of the modem (C/S) standards: DOCSIS 1.1, 2.0, or 3.1. If you need to get cable modem service, please check with your cable service provider.
- To use the Quick Start, you need a computer, an IPv4 or IPv6 address.

If your cable service provider provided a cable modem starter kit, please confirm cable. You will not have to install anything on the cable modem starter kit from your manufacturer, or it may be required for a computer if you don't have or don't want to use a cable modem starter kit.

If your cable service provider provided a cable modem starter kit

Some cable modem providers supply a cable modem starter kit that includes everything you need to get started. The kit may include a modem, cables, and a power supply. If you have a cable modem starter kit, you may not need to install anything on the cable modem. You may also be asked to provide the modem's model name and number, which is a **MODEL#**. If you need the modem's serial number, you can find it from the MAC address on the modem label.

We recommend you plug the modem's power cord directly into the modem service company power cable and then connect a computer using either the provided Ethernet cable or the network before connecting the Cable Modem/Router to the Wireless Network.

Note: Please refer to the Hardware Connection section. You will need to hold a paperclip at the end of the cable modem when it is plugged into the connection.

After you have installed your cable modem and the connection is established, you can connect your cable modem to your computer for Internet.

Note: When you connect to the Internet, you will be asked to provide your cable modem's MAC ADDRESS, which is a unique address on the system of government. This information is used to identify cable modem services. If you already have a cable modem, you can identify the cable company (C/S) by looking at the modem. You may also be asked to provide the modem's model name and number, which is a **MODEL#**. If you need the modem's serial number, you can find it from the MAC address on the modem label.
