Planning and Architectural Design of Modern Command Control Communications and Information Systems A. Nejat Ince, Cem Evrendilek, Dag Wilhelmsen, Fadil Gezer, 2012-12-06 The subject of this book is Command Control Communication and Information 3 C I which is the management infrastructure for any large or complex dynamic resource systems Here command means the determination of what to do and control means the ongoing management of the execution of a command 3 Decision making is the essence of C I which is accomplished through a phased implementation of a set of facilities communications personnel equipment and procedures for monitoring forecasting planning directing allocating resources and generating options to achieve specific and general objectives 3 The C I system

that is in question here is for a strategic military command including its subordinate commands Although the design methodology that will be expounded in the book is for a military system it can to a large extent apply also to tactical military as well as to civilian management information systems MIS 3 A C I system is a decision making network that reflects a hierarchical organization 3 of C I nodes Each node is responsible for the management of some portion of the available resources where the higher level nodes are responsible for a 3 correspondingly greater portion of the resources Within a C I system both command and control decision making occur at every level of the hierarchy Command decisions at one level determine how to satisfy the management decisions at a higher level

Advances in Command, Control & Communication Systems Christopher John Harris, I. White, 1987 This book describes some of the developments in Command Control and Communication C3 systems The topics cover the design of large real time man machine systems which are now a vital area of intensive scientific and financial investment C3 systems are for complex resource management and planning and although this has a predominantly military connotation similar systems are now developing in civil sector applications public utilities and banking Topics discussed include the design and structure of C3 systems databases standards the man machine interface and advanced processing including the sensor data fusion and artificial intelligence It is the multifaceted nature of C3 that this book seeks to capture The subject is too vast to survey comprehensively but this text offers the reader an important insight into this critically important aspect of modern technology

C2 of C3: Command and Control of Command, Control, Communication Systems, 1988 The Army s ongoing acquisition of modernized Command and Control Communications C3 Systems portends a quantum leap in present capabilities Tremendously expensive the effort represents a dramatic shift from past procurement policies inasmuch as it recognizes the need for a systemic interactive C3 network that will not only support the Army s Air Land Battle doctrine but also the C3 needs of Joint and or Combined operations While the acquisition effort is laudable the author perceives a weakness in the Army s ability to adequately manage these new found resources Simply put the capabilities and complexity of existing and soon to be fielded systems outstrip the antiquated management techniques used for controlling these vital resources In order to meet this challenge the author offers a conceptual approach for harnessing our C3 systems Key to this approach is the need to accurately recognize the problem In order to function properly the new systems must be engineered and installed to meet very precise and exacting requirements a need exacerbated by the trend towards increased interconnectivity and interdependence of disparate systems The answer therefore lies in management systems which acknowledge and address this critical need
