,1916 *Multidimensional Aspects of Occupational Segregation* Keiko Nakao,2024-04-29 One of the strengths of this book is that it expresses occupational segregation from multidimensional viewpoints using correspondence analysis Through a quantitative approach the book examines occupational segregation by education and gender in response to industrial transformation in Japan and other countries The transformation of industrial structure such as post industrialization demands a reconsideration of traditional perspectives in sociology especially in social stratification In other words it is a shift from the attribute to the achievement principle Higher technological innovations will create higher levels of industries and those industries will require jobs that need greater human capital In short the meritocracy will be promoted Meritocracy is certainly considered persuasive In fact previous researchers have looked primarily at a person s occupation as a measure of social status In Japan jobs are normally acquired after completing education thus one s educational achievement plays an important role Especially in recent years however education alone has not been enough to explain social status This book therefore focuses on occupational segregation by gender in addition to education in post industrial society Can occupational segregation by gender be weakened in the highly educated group Is this a universal story in modern society Because post industrialization is part of the larger story of modernization international perspectives are needed to examine the linkage between education and gender occupational segregation This book explores occupational segregation by gender in response to industrial transformation in Japan and other countries
