Commutative Harmonic Analysis I V.P. Khavin,N.K. Nikol'skij,2013-03-09 This volume is the first in the series devoted to the commutative harmonic analysis a fundamental part of the contemporary mathematics The fundamental nature of this subject however has been determined so long ago that unlike in other volumes of this publication we have to start with simple notions which have been in constant use in mathematics and physics Planning the series as a whole we have assumed that harmonic analysis is based on a small number of axioms simply and clearly formulated in terms of group theory which illustrate its sources of ideas However our subject cannot be completely reduced to those axioms This part of mathematics is so well developed and has so many different sides to it that no abstract scheme is able to cover its immense concreteness completely In particular it relates to an enormous stock of facts accumulated by the classical trigonometric harmonic analysis Moreover subjected to a general mathematical tendency of integration and diffusion of conventional intersubject borders harmonic analysis in its modem form more and more rests on non translation invariant constructions For example one ofthe most signifi cant achievements of latter decades which has substantially changed the whole shape of harmonic analysis is the penetration in this subject of subtle techniques of singular integral operators 　交换调和分析 V. Commutative Harmonic Analysis I Viktor Petrovich Khavin,1991 　General Topology III A. V. Arhangel' skii,2013-03-09 The problem of metrization of topological spaces has had an enormous influence on the development of general topology Singling out the basic topo logical components of metrizability has determined the main reference points in the construction of the classification of topological spaces These are pri marily paracompactness collectionwise normality monotonic normality and perfect normality the concepts of a stratifiable space Moore space and u space point countable base

and uniform base The method of covers has taken up a leading role in this classification Of paramount significance in the applications of this method have been the properties of covers relating to the character of their elements open covers closed covers the mutual dispo sition of these elements star finite point finite locally finite covers etc as well as the relations of refinement between covers simple refinement refine ment with closure combinatorial refinement star and strong star refinement On this basis a hierarchy of properties of paracompactness type has been sin gled out together with the classes of spaces corresponding to them the most important of which is the class of paracompacta The behaviour of families of covers with respect to the topology of a space has important significance Here first and foremost is the notion of a refining family of covers a development which appears in several modifications and together with the notion of paracompactness plays a key role in metrization problems   Partial Differential Equations VIII M.A. Shubin,2012-12-06 This volume of the EMS contains three articles on linear overdetermined systems of partial differential equations dissipative Schroedinger operators and index theorems Each article presents a comprehensive survey of its subject discussing fundamental results such as the construction of compatibility operators and complexes for elliptic parabolic and hyperbolic coercive problems the method of functional models and the Atiyah Singer index theorem and its generalisations Both classical and recent results are explained in detail and illustrated by means of examples   Algebraic Geometry II I.R. Shafarevich,2013-11-22 This EMS volume consists of two parts The first part is devoted to the exposition of the cohomology theory of algebraic varieties The second part deals with algebraic surfaces The authors have taken pains to present the material rigorously and coherently The book contains numerous examples and insights on various topics This book will be immensely useful to mathematicians and graduate students working in algebraic geometry arithmetic algebraic geometry complex analysis and related fields The authors are well known experts in the field and I R Shafarevich is also known for being the author of volume 11 of the Encyclopaedia   Dynamical Systems IX D.V. Anosov,2013-03-14 This volume is devoted to the hyperbolic theory of dynamical systems DS that is the theory of smooth DS s with hyperbolic behaviour of the tra jectories generally speaking not the individual trajectories but trajectories filling out more or less significant subsets in the phase space Hyperbolicity the property that under a small displacement of any of a trajectory consists in point of it to one side of the trajectory the change with time of the relative positions of the original and displaced points resulting from the action of the DS is reminiscent of the mot ion next to a saddle If there are sufficiently many such trajectories and the phase space is compact then although they tend to diverge from one another as it were they have nowhere to go and their behaviour acquires a complicated intricate character In the physical literature one often talks about chaos in such situations This type of be haviour would appear to be the opposite of the more customary and simple type of behaviour characterized by its own kind of stability and regularity of the motions these words are for the moment not being used as a strict ter 1 minology but rather as descriptive informal terms The ergodic properties of DS s with hyperbolic behaviour of trajectories Bunimovich et al 1985 have already been

considered in Volume 2 of this series In this volume we therefore consider mainly the properties of a topological character see below 2 for further details *50 Years with Hardy Spaces* Anton Baranov,Sergei Kisliakov,Nikolai Nikolski,2018-03-28 Written in honor of Victor Havin 1933 2015 this volume presents a collection of surveys and original papers on harmonic and complex analysis function spaces and related topics authored by internationally recognized experts in the fields It also features an illustrated scientific biography of Victor Havin one of the leading analysts of the second half of the 20th century and founder of the Saint Petersburg Analysis Seminar A complete list of his publications as well as his public speech Mathematics as a source of certainty and uncertainty presented at the Doctor Honoris Causa ceremony at Link ping University are also included *Journal of analysis and its applications* ,1982 **Partial Differential Equations III** Egorov, Yurii Vladimirovich Egorov,Mikhail Aleksandrovich Shubin,1991 Two general questions regarding partial differential equations are explored in detail in this volume of the Encyclopaedia The first is the Cauchy problem and its attendant question of well posedness or correctness The authors address this question in the context of PDEs with constant coefficients and more general convolution equations in the first two chapters The third chapter extends a number of these results to equations with variable coefficients The second topic is the qualitative theory of second order linear PDEs in particular elliptic and parabolic equations Thus the second part of the book is primarily a look at the behavior of solutions of these equations There are versions of the maximum principle the Phragmen Lindel f theorem and Harnack s inequality discussed for both elliptic and parabolic equations The book is intended for readers who are already familiar with the basic material in the theory of partial differential equations Partial Differential Equations III Mikhail Aleksandrovich Shubin,1991
