thesis has involved two related tasks. The first was to analyse Zoltán Kodály's philosophy of music education and on this basis to develop a computer-assisted instruction method (CAI) for teaching music theory and solfège ear training. The second task was to experiment with the effectiveness of this method and compare it with traditional approaches to teaching. Many students find music theory and ear training difficult. During the 1990s, in connection with my licentiate thesis *Solfège in the Computer Classroom* (2000), I initiated this research project and developed a CAI method for teaching music theory and solfège. I wanted to see just how useful Kodály's approach could be in computer-aided teaching and learning. The results show that the Kodály approach can be successfully applied to the development of a computer-aided solfège programme and the Kodály system is applicable to new learning environments and teaching practices. In music education, CAI is an area with great potential for development. It offers multiple learning options and can enhance students' motivation to study music theory and ear training. Some of the learning outcomes were even better than with the traditional ways of learning. The results also show, however, that teacher-pupil interaction is essential in a computer-aided learning programme.

Reader's Guide to Music Murray Steib, 2013-12-02. The *Reader's Guide to Music* is designed to provide a useful single-volume guide to the ever-increasing number of English-language book-length studies in music. Each entry consists of a bibliography of some 3-20 titles and an essay in which these titles are evaluated by an expert in the field in light of the history of writing and scholarship on the given topic. The more than 500 entries include not just writings on major composers in music history but also the genres in which they worked, from early chant to rock and roll, and topics important to the various disciplines of music scholarship, from aesthetics to gay/lesbian musicology.
