rapid advances in artificial intelligence and virtual reality Are we living in a simulation MIT computer scientist Rizwan Virk draws from research and concepts from computer science artificial intelligence video games quantum physics and ancient mystics to explain why we may be living inside a simulated reality like the Matrix Simulation theory explains some of the biggest mysteries of quantum and relativistic physics such as quantum indeterminacy parallel universes and the integral nature of the speed of light using information and computation Virk shows how the evolution of our video games including virtual reality augmented reality artificial intelligence and quantum computing will lead us to a technological singularity We will reach the simulation point where we can develop all encompassing virtual worlds like the OASIS in Ready Player One or The Matrix and in fact we are already likely inside such a simulation While the idea sounds like science fiction many scientists engineers and professors have given the simulation hypothesis serious consideration including Elon Musk Neil deGrasse Tyson and Nick Bostrom But the simulation hypothesis is not just a modern idea Philosophers of all traditions have long contended that we are living in some kind of illusion and that there are other realities that we can access with our minds The Simulation Hypothesis is the definitive book on simulation theory and is now completely updated to reflect the latest developments in artificial intelligence and virtual reality Whether you are a computer scientist a fan of science fiction like the Matrix movies a video game enthusiast a spiritual seeker or simply a fan of mind bending thought experiments you will never look at the world the same way again

perspective and theorem proving and machine learning Each of these sessions is discussed below in more detail

DISTRIBUTED INTELLIGENT AGENTS Research in distributed AI is concerned with the problem of how multiple agents and societies of agents can be organized to co operate and collectively solve a problem The first paper by Chakravarty MIT focuses on the problem of evolving agents in the context of Minsky s society of mind theory It addresses the question of how new agents can be formed by transforming existing ones and illustrates the theory with an example from game playing Smieja GMD Germany focuses on the problem of organizing networks of agents which consist internally of neural networks
