Communications and Data Management Thomas F. Walton, 1976-01-01 *Advances in Data Communications Management*, 1980 **Data Broadcast and Data Management in Wireless Communications** Xiaofeng Gao, University of Texas at Dallas. Graduate Program in Computer Science, 2010 *Artificial Intelligence and Simulation* Tag G. Kim, 2005-01-31 This book constitutes the refereed post proceedings of the 13th International Conference on AI Simulation and Planning in High Autonomy Systems AIS 2004 held in Jeju Island Korea in October 2004 The 74 revised full papers presented together with 2 invited keynote papers were carefully reviewed and selected from 170 submissions after the conference the papers went through another round of revision The papers are organized in topical sections on modeling and simulation methodologies intelligent control computer and network security HLA and simulator interoperation manufacturing agent based modeling DEVS modeling and simulation parallel and distributed modeling and simulation mobile computer networks Web based simulation and natural systems modeling and simulation environments AI and simulation component based modeling watermarking and semantics graphics visualization and animation and business modeling **StarBriefs 2001**, 2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions *StarBriefs Plus* Andre Heck, 2004-03-31 With about 200 000 entries StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations acronyms contractions and symbols within astronomy related space sciences and other related fields As such this invaluable reference source and its companion volume StarGuides Plus should be on the reference shelf of every library organization or individual with any interest in these areas Besides astronomy and associated space sciences related fields such as aeronautics aeronomy astronautics atmospheric sciences chemistry communications computer sciences data processing education electronics engineering energetics environment geodesy geophysics information handling management mathematics meteorology optics physics remote sensing and so on are also covered when justified Terms in common use and or of general interest have also been included where appropriate *Grid and Cooperative Computing*

Minglu Li, Xian-He Sun, Qianni Deng, Jun Ni, 2004-04-20 Grid and cooperative computing has emerged as a new frontier of information technology. It aims to share and coordinate distributed and heterogeneous network resources for better performance and functionality that can otherwise not be achieved. This volume contains the papers presented at the 2nd International Workshop on Grid and Cooperative Computing GCC 2003 which was held in Shanghai P R China during December 7-10 2003. GCC is designed to serve as a forum to present current and future work as well as to exchange research ideas among researchers, developers, practitioners, and users in grid computing, web services, and cooperative computing including theory and applications. For this workshop we received over 550 paper submissions from 22 countries and regions. All the papers were peer reviewed in depth and qualitatively graded on their relevance, originality, significance, presentation, and the overall appropriateness of their acceptance. Any concerns raised were discussed by the program committee. The organizing committee selected 176 papers for conference presentation (full papers) and 173 submissions for poster presentation (short papers). The papers included herein represent the forefront of research from China, USA, UK, Canada, Switzerland, Japan, Australia, India, Korea, Singapore, Brazil, Norway, Greece, Iran, Turkey, Oman, Pakistan, and other countries. More than 600 attendees participated in the technical section and the exhibition of the workshop.
