national security context decision makers must analyse unreliable and mainly non technical information in order to identify an enemy of the state Attribution in both contexts is political in criminal cases laws reflect society s prevailing norms and powers in national security cases attribution reflects a state s will to maintain increase or assert its power However both processes differ on many levels The constraints which reflect common aspects of many other political issues constitute the structure of the book the need for judgement calls the role of private companies the standards of evidence the role of time and the plausible deniability of attacks
