Cybernetics Of Consciousness:

Cybernetics and the Philosophy of Mind Kenneth Sayre, 2014-11-20 This book published in 1976 presents an entirely original approach to the subject of the mind body problem examining it in terms of the conceptual links between the physical sciences and the sciences of human behaviour It is based on the cybernetic concepts of information and feedback and on the related concepts of thermodynamic and communication theoretic entropy The foundation of the approach is the theme of continuity between evolution learning and human consciousness The author defines life as a process of energy exchange between organism and environment and evolution as a feedback process maintaining equilibrium between environment and reproductive group He demonstrates that closely related feedback processes on the levels of the behaving organism and of the organism s nervous system constitute the phenomena of learning and consciousness respectively He analyses language as an expedient for extending human information processing and control capacities beyond those provided by one s own nervous system and shows reason to be a mode of processing information in the form of concepts removed from immediate stimulus control The last chapter touches on colour vision pleasure and pain intentionality self awareness and other subjective phenomena Of special interest to the communication theorist and philosopher this study is also of interest to psychologists and anyone interested in the connection between the physical and life sciences [Unconscious Intelligence in Cybernetic Psychology](#) Torben Hansen, Henrik Hass, 2023-09-14 This important book examines how the growing field of cybernetic psychology the study of the creative complexity of the mind can be applied to a range of different realms tapping into the unconscious potential within us all Cybernetic psychology integrates theories from various schools of thought bringing them together in one unified theory First developed and described by Danish author and psychotherapist Ole Vedfelt It can be used in therapeutic practice in relation to learning and pedagogics and as a tool for better leadership The 15 chapters within this volume apply the theory to these as well as other areas including ecology creativity mindfulness and scientific enquiry itself Insightful and wide ranging the book will appeal to psychotherapists and those working within mental health as well as students and researchers across Education Psychology and beyond [The Cybernetics and Mathematics of Consciousness](#) Antonin Tuynman, PhD, 2020-05-14 If you are not convinced by the idea of reductive materialists that consciousness magically emerges from complexity in material structures or processes or if you are not satisfied with the viewpoint of idealists that matter is a mere thought form then the present hypothesis may be something for you This is however a popular science book so don t expect to be drowned in formulas and equations In this collection of Capita Selecta from my previous books I will address the cybernetic dynamics of consciousness Starting from the premise that Consciousness is the Ontological Primitive I will propose mechanisms which may explain how a digital mathematical and material existence can be generated Digging into Category Theory Computational Simulacra and Quantum Computing I will explore the mechanics of self sustaining self referential feedback loops as the Modus Operandi of Consciousness Let s dive in

Bryen,2012-12-06 This study could not have been written before Professor Karl Deutsch made his great contribution to political science in his book *The Nerves of Government* In applying the concepts elaborated in that work to the study of international politics it has been necessary to interpret and occasionally add to the concepts developed by Professor Deutsch I do not know whether Deutsch would accept these changes modifications and interpretations Here I can only say that I have attempted to stay in the same spirit that I think motivated Professor Deutsch s pioneering study That spirit is expressed throughout his work It is that all studies of politics and all techniques and models suggested as instrument of political analysis have this purpose that men should be more able to act in politics with their eyes open In completing this work owe much to many Mrs Susan Schellenberg aided me in identifying sections of an earlier draft that were unclear and helped me test some of the ideas I added to Deutsch s work Mr Frederick Slutsky did some preliminary testing of the action system formulations employed in the third chapter by using quantitative methods Particular gratitude is due to the committee who saw this manuscript as a dissertation at Tulane University This committee led by Professor Henry L Mason consisted of Professor Warren Roberts Jr Professor James D Cochrane Professor Jean M Danielson and Professor John S Gillespie **Consciousness** Kenneth M. Sayre,1969 *Consciousness And Robot Sentience* Pentti O Haikonen,2012-09-11 Robots are becoming more human but could they also become sentient and have human like consciousness What is consciousness exactly It is a fact that our thoughts and consciousness are based on the neural activity of the brain It is also a fact that we do not perceive our brain activity as it really is patterns of neural firings Instead we perceive our sensations and thoughts apparently as they are What kind of condition would transform the neural activity into this kind of internal appearance This is the basic problem of consciousness The author proposes an explanation that also provides preconditions for true conscious cognition the requirement of a direct perceptive system with inherent sub symbolic and symbolic information processing Associative neural information processing with distributed signal representations is introduced as a method that satisfies these requirements Conscious robot cognition also calls for information integration and sensorimotor integration This requirement is satisfied by the Haikonen Cognitive Architecture HCA This book demystifies both the enigmatic philosophical issues of consciousness and

the practical engineering issues of conscious robots by presenting them in an easy to understand manner for the benefit of students researchers philosophers and engineers in the field *Applied Systems and Cybernetics* George E. Lasker,1981

Modern Trends in Cybernetics and Systems: Sections 5: Communications, education and informatics, 6: Artificial intelligence, 7: Neuro- and bio-cybernetics ,1977 Posthumanism Pramod K. Nayar,2014 This timely book examines the rise of posthumanism as both a material condition and a developing philosophical ethical project in the age of cloning gene engineering organ transplants and implants Nayar first maps the political and philosophical critiques of traditional humanism revealing its exclusionary and speciesist politics that position the human as a distinctive and dominant life form He then contextualizes the posthumanist vision which drawing upon biomedical engineering and techno scientific studies concludes that human consciousness is shaped by its co evolution with other life forms and our human form inescapably influenced by tools and technology Finally the book explores posthumanism s roots in disability studies animal studies and bioethics to underscore the constructed nature of normalcy in bodies and the singularity of species and life itself As this book powerfully demonstrates posthumanism marks a radical reassessment of the human as constituted by symbiosis assimilation difference and dependence upon and with other species Mapping the terrain of these far reaching debates Posthumanism will be an invaluable companion to students of cultural studies and modern and contemporary literature
