Improving the Regulatory Review Process: Assessing Performance and Setting Targets J. A. Neil McAuslane, Stuart R. Walker, 1997 At a time when it is becoming usual for medicines to be developed for a global market and pharmaceutical companies are endeavouring to expedite the drug development process Regulatory Authorities are concentrating on improving their efficiency and effectiveness Therefore it is not surprising that questions are being asked as to how performance might be measured and compared between different authorities who are now often in receipt of dossiers that have been submitted to

several agencies at the same time Issues such as what target should be set for the review of new medicines and how can quality be assured are now considered to be of critical importance The twelfth CMR International Workshop held in January 1997 provided the opportunity for Regulatory Authority and industry personnel from Europe North America Australia and Japan to openly discuss experiences and exchange views on how to improve the review process The proceedings of this meeting provide a comprehensive overview of the current review process in different countries and the need for performance measures and targets This volume summarises the many sugges

The Cytokine Network and Immune Functions Jacques Thèze,1999 The great scientific progress in our understanding of the genetics chemistry biology and pathophysiology of the cytokines has made clear the need for a comprehensive discussion of these molecules as part of a unified system The Cytokine Network and Immune Functions provides just such a treatment It represents the efforts of many of the most prominent scientists studying these molecules Not only does it present a general discussion of each of the major cytokines or sets of cytokines it deals in detail with how these molecules affect all aspects of immune function and how they contribute to a wide range of pathological conditions As the title clearly indicates this book does not treat individual cytokines in isolation it recognizes that they act in a complex web of synergistic and counter regulatory effects so as to provide opportunities for the very fine control of immune responses Cytokine biology is not only a fascinating scientific discipline giving insight into how the immune and inflammatory systems are linked and regulated but also it is a subject of profound importance in modern medicine As the chapters in the section of this book entitled Cytokines in Pathology indicate virtually all insults to the organism be they acute or chronic call upon cytokine responses and virtually every disease entity has a component involving the function of cytokines In some diseases such as allergy and asthma and many of the autoimmune disorders abnormal cytokine responses are at the very heart of the disease process in others their impact may be more peripheral There can be no doubt however that the study of cytokine biology has contributed greatly to the growing
