Cytokines And Mental Health:

Cytokines and Mental Health Ziad Kronfol,2012-12-06 Cytokines and Mental Health explores the relationship between cytokines neural circuitry and mental health It is interdisciplinary and translational bringing together information that spans the spectrum from the molecular and cellular levels to the patient and the clinic Content includes chapters that discuss cytokine pathways in the brain the neurochemical and neuroendocrine effects of cytokines and the behavioral effects of cytokines including sickness behavior These chapters in basic research are followed by a more clinical section that discusses the role of cytokines in neuropsychiatric disorders such as major depression schizophrenia and Alzheimer s disease The book offers different things to different people It should be of great interest to neuroscientists and immunologists working in the field of psychoneuroimmunology It would also greatly benefit mental health professionals including psychiatrists psychologists and clinicians of diverse background who are interested in mind body medicine [Cytokines, Stress, and Depression](#) Robert Dantzer,Emmanuelle E. Wollmann,Raz Yirmiya,2007-11-23 Cytokines had been characterized in the early eighties as communication molecules between immune cells and between immunocytes and other peripheral cells such as fibroblasts and endothelial cells They play a key role in the regulation of the immune response and the coordination of the host response to infection Based on these biological properties nobody would have predicted that one decade later cytokines would burst upon neurosciences and permeate into several avenues of current research In neurology the connection between cytokines and inflammation and the demonstration of a pivotal role of some of these molecules in cell death by apoptosis prompted the investigation of their involvement in several neurological diseases involving an inflammatory component including multiple sclerosis brain trauma stroke and Alzheimer s disease This movement started in the late eighties and the corresponding field of research known as neuroimmunology is presently booming In psychiatry however the relationship between cytokines and mental disorders was much less evident and took longer to materialize The first indication that cytokines might be involved in psychopathology came from cancerology and internal medicine [New Research in Mental Health](#) ,2004 **Coronavirus Disease (COVID-19): Pathophysiology, Epidemiology, Clinical Management and Public Health Response** ,2023-01-25 Volume I A An outbreak of a respiratory disease first reported in Wuhan China in December 2019 and the causative agent was discovered in January 2020 to be a novel betacoronavirus of the same subgenus as SARS CoV and named severe acute respiratory syndrome coronavirus 2 SARS CoV 2 Coronavirus disease 2019 COVID 19 has rapidly disseminated worldwide with clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and a fatality rate estimated around 2% Person to person transmission is occurring both in the community and healthcare settings The World Health Organization WHO has recently declared the COVID 19 epidemic a public health emergency of international concern The ongoing outbreak presents many clinical and public health management challenges due to limited understanding of viral pathogenesis risk factors for infection natural history of disease including clinical

presentation and outcomes prognostic factors for severe illness period of infectivity modes and extent of virus inter human transmission as well as effective preventive measures and public health response and containment interventions There are no antiviral treatment nor vaccine available but fast track research and development efforts including clinical therapeutic trials are ongoing across the world Managing this serious epidemic requires the appropriate deployment of limited human resources across all cadres of health care and public health staff including clinical laboratory managerial and epidemiological data analysis and risk assessment experts It presents challenges around public communication and messaging around risk with the potential for misinformation and disinformation Therefore integrated operational research and intervention learning from experiences across different fields and settings should contribute towards better understanding and managing COVID 19 This Research Topic aims to highlight interdisciplinary research approaches deployed during the COVID 19 epidemic addressing knowledge gaps and generating evidence for its improved management and control It will incorporate critical theoretically informed and empirically grounded original research contributions using diverse approaches experimental observational and intervention studies conceptual framing expert opinions and reviews from across the world The Research Topic proposes a multi dimensional approach to improving the management of COVID 19 with scientific contributions from all areas of virology immunology clinical microbiology epidemiology therapeutics communications as well as infection prevention and public health risk assessment and management studies
