

Cytotoxins and Immunotoxins for Cancer Therapy: Clinical Applications (Pharmaceutical Science Series)

Recent advances in cytotoxins and immunotoxins are accelerating our understanding of cancer and leading to more effective therapeutic treatments. Although a large number of articles have been published on these cytotoxins and immunotoxins, this important information has yet to be compiled into one comprehensive resource. For the first time, *Cytotoxins and Immunotoxins for Cancer Therapy: Clinical Applications* presents state-of-the-art information on various cytotoxins and immunotoxins in a single, highly anticipated publication. The editors bring together leading researchers to summarize their work and discuss clinical trial data concerning some of the most widely studied tumors. The book describes *Pseudomonas* exotoxin (PE)-based immunotoxins and presents the latest results from clinical trials for the treatment of recurrent glioblastoma and other human cancers. It reviews the role of ricin-based immunotoxins for the treatment of lymphoma, explores several DT-based immunotoxins, and details the preclinical and clinical development of the first FDA-approved cytotoxin. With a focus on clinical developmental approaches to the use of cytotoxins and immunotoxins, this book discusses exciting possibilities for cancer therapy. It is a valuable resource for scientists, researchers, and clinicians involved in the development of new treatments that can help keep cancer under control, and may ultimately lead to a cure.
