Dark Bright Water:

Polarized Light in Animal Vision Gábor Horváth, Dezső Varju, 2013-06-29 The subject of this volume is two fold First it gathers typical polarization patterns occurring in nature Second it surveys the polarization sensitive animals the physiological mechanisms and biological functions of polarization sensitivity as well as the polarization guided behaviour in animals The monograph is prepared for biologists physicists and meteorologists especially for experts of atmospheric optics and animal vision who wish to understand and reveal the message hidden in polarization patterns of the optical environment not directly accessible to the human visual system but measurable by polarimetry and perceived by many animals Our volume is an attempt to build a bridge between these two physical and biological fields In Part I we introduce the reader to the elements of imaging polarimetry This technique can be efficiently used e.g. in atmospheric optics remote sensing and biology In Part II we deal with typical polarization patterns of the natural optical environment Sunrise sunset clear skies cloudy skies moonshine and total solar eclipses all mean quite different illumination conditions which also affect the spatial distribution and strength of celestial polarization We present the polarization patterns of the sky and its unpolarized neutral points under sunlit moonlit clear cloudy and eclipsed conditions as a function of solar elevation The polarization pattern of a rainbow is also shown That part of the spectrum is derived in which perception of skylight polarization is optimal under partly cloudy skies

Thyroid Cancer H.-J. Biersack, F. Grünwald, 2013-03-14 Thyroid cancer was first described at the end of the eighteenth century For one and a half centuries surgery remained the only effective therapeutic option for this cancer until in 1946 radioiodine therapy was performed for the first time Radioiodine therapy was brought to Germany 4 years later in 1950 In the intervening 50 years the use of iodine 131 has proved able to cure the cancer and its metastases Percutaneous radiation therapy had been added to the therapeutic armamentarium but even now there is heated debate as to its potential Suppressing thyroid hormone synthesis with 1-thyroxine supplement is a prerequisite for successful treatment while cytotoxic drugs are mainly used for palliation During the past 10 years various new diagnostic and therapeutic approaches have been introduced High dose radioiodine therapy as well as redifferentiation therapy with retinoic acid seem beneficial Diagnostic procedures such as magnetic resonance imaging MRI positron emission tomography PET as well as isonitriles MIBI 201 and thallium Tl have

proved useful for the follow up of thyroid cancer Two special issues are also discussed in this book Iodine supplementation in areas of iodine deficiency has led to a change in pathology insofar as papillary thyroid cancer with a better prognosis has become more frequent than follicular carcinoma A special chapter is dedicated to thyroid cancer in Chernobyl children
