Controversy Catastrophism and Evolution Trevor Palmer,2012-12-06 In Controversy Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record According to the catastrophists new species do not evolve gradually they proliferate following sudden mass extinctions Placing this major change of perspective within the context of a range of ancient debates Palmer discusses such topics as the history of the solar system present day extraterrestrial threats to earth hominid evolution and the fossil record **The Nature of Life** Mark A. The Selfish Gene Pool D. M. Wonderly, 1996-10-24 The Selfish Gene Pool was written to encourage dialogue on the issue of the claim that all people are destined to act selfishly in all situations whether they are aware of it or not because their fitness in resulting generations depends on it This book provides an overview of a motivation model designed to support a positive interpretation of altruistic behavior It specifically denies the claims of sociobiologists selfish gene theory and provides a thorough rebuttal of their argument Unfortunately the sociobiological analysis of behavior ignores the influence of a moral sense and the fact that altruistic behavior which they deny exists is directed not toward the resident gene but toward the totality of the relevant gene pool In spite of the criticism that has been leveled at sociobiologist extremists nothing has appeared in print that represents an alternative explanation for altruistic behavior *Biology* Gerald Audesirk, Teresa Audesirk, 1986 **Choice**, 1983 [The Evolution-creation Controversy II](#), 1999 **Organization and Change in Complex Systems** Marcelo Alonso, 1990
