Dynamic Stochastic Models from Empirical Data Rangasami Lakshminarayana Kashyap, Adiseshappa Ramachandra Rao, Adiseshappa Ramachandra Rao, 1976 Dynamic stochastic models from empirical data *Dynamic Stochastic Models from Empirical Data* Anil Kashyap, 1976-09-17 Dynamic Stochastic Models from Empirical Data [Dynamical Stochastic Models from Empirical Data](#) Rangasami Lakshminarayana Kashyap, Adiseshappa Ramachandra Rao, 1976 **Concise Encyclopedia of Modelling and Simulation** D.P. Atherton, P. Borne, 2013-10-22 The Concise Encyclopedia of Modelling Simulation contains 172 alphabetically arranged articles describing the modelling and simulation of physical systems The emphasis is on mathematical models and their various forms although other types of models such as knowledge based linguistics based graphical and data based are also discussed The articles are revised from the Systems Control Encyclopedia and many newly commissioned articles are included describing recent developments in the field Articles on identification cover all aspects of this problem from the use and choice of specific test signals to problems of model order and the many algorithms and approaches to parameter estimation Computational techniques such as the finite element method that play an important role in analyzing nonlinear models are covered Articles outline the development of simulation consider currently available simulation languages describe applications and cover current developments in the area Where appropriate illustrations and tables are included to clarify particular topics This encyclopedia will be a valuable reference source for all practising engineers researchers and postgraduate students in the field of modelling and simulation *Trends and Progress in System Identification* Pieter Eykhoff, 2014-05-20 Trends and Progress in System Identification is a three part book that focuses on model considerations identification methods and experimental conditions involved in system identification Organized into 10 chapters this book begins with a discussion of model method in system identification citing four examples differing on the nature of the models involved the nature of the fields and their goals Subsequent chapters describe the most important aspects of model theory the classical methods and time series estimation application of least squares and related techniques for the estimation of dynamic system parameters the maximum likelihood and error prediction methods and the modern development of statistical methods Non parametric approaches identification of nonlinear systems by piecewise approximation and the minimax identification are then explained Other chapters explore the Bayesian approach to system identification choice of input signals and choice and effect of different feedback configurations in system identification This book will be useful for control engineers system scientists biologists and members of other disciplines dealing with dynamical relations [Empirical Dynamic Stochastic Models for Firm Dividends](#) Edward P. Kao, 2001 This paper develops a framework for the empirical analysis and quantitative modeling of firm dividends viewed as discrete stochastic processes The framework built around the concept of sojourn intervals the length of time that dividends remain unchanged is first used to identify a number of striking dynamic patterns in the dividend payouts of US corporations some of which are linked to the length of

time that the firm has been paying regular dividends For example while it is well known that stock splits tend to be followed by dividend increases we find a similar tendency following dividend cuts Furthermore changes in dividend payouts are very poor predictors of such cuts and their frequency is inversely related to the length of time the firm has been paying dividends The paper then provides a class of empirical models of firm dividends based on absorbing Markov chains with phase type structure that are consistent with dividend discreteness and are also sufficiently flexible to address the dynamic patterns observed in the data An appropriately calibrated empirical model is shown to perform quite well in matching sample moments and in simulating actual sample paths The calibration also suggests that the empirical transition matrix of firm dividends has properties that may be generally useful in developing accurate but tractable dynamic specifications for them

GIS and Geostatistical Techniques for Groundwater Science Senapathi Venkatramanan, Prasanna Mohan

Viswanathan, Sang Yong Chung, 2019-05-28 GIS and Geostatistical Techniques for Groundwater Science provides a detailed synthesis of the application of GIS and geostatistics in groundwater studies As the book illustrates GIS can be a powerful tool for developing solutions for water resource problems assessing water quality and managing water resources Beginning with an introduction to the history of GIS and geostatistical techniques in groundwater studies the book then describes various spatial techniques including case studies for various applications from quality assessment to resource management This book assembles the most up to date techniques in GIS and geostatistics as they relate to groundwater one of our most important natural resources Provides details on the application of GIS and statistics in groundwater studies Includes practical coverage of the use of spatial analysis techniques in groundwater science Bridges the gap between geostatistics and GIS as it relates to groundwater science and management Offers worldwide case studies to illustrate various techniques and applications in addressing groundwater issues

System Identification R. Isermann, 2014-05-23

System Identification is a special section of the International Federation of Automatic Control IFAC Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification Topics include modeling and identification step response and frequency response methods correlation methods least squares parameter estimation and

maximum likelihood and prediction error methods After analyzing the basic ideas concerning the parameter estimation methods the book elaborates on the asymptotic properties of these methods and then investigates the application of the methods to particular model structures The text then discusses the practical aspects of process identification which includes the usual general procedures for process identification selection of input signals and sampling time offline and on line identification comparison of parameter estimation methods data filtering model order testing and model verification Computer program packages are also discussed This compilation of tutorial papers aims to introduce the newcomers and non specialists in this field to some of the basic methods and procedures used for system identification
