Dynamics In Several Complex Variables:

Dynamics in Several Complex Variables John Erik Fornæss, 1996 This CBMS lecture series held in Albany New York in June 1994 aimed to introduce the audience to the literature on complex dynamics in higher dimension Some of the lectures are updated versions of earlier lectures given jointly with Nessim Sibony in Montreal 1993 the author's intent in this book is to give an expansion of the Montreal lectures basing complex dynamics in higher dimension systematically on pluripotential theory

Dynamics in Several Complex Variables, 1995 This CBMS lecture series held in Albany New York in June 1994 aimed to introduce the audience to the literature on complex dynamics in higher dimension Some of the lectures are updated versions of earlier lectures given jointly with Nessim Sibony in Montreal 1993 The author's intent in this book is to give an expansion of the Montreal lectures basing complex dynamics in higher dimension systematically on pluripotential theory These notes provide an easy to read introduction into the field an introduction that motivates the topics The monograph then points readers towards technically m

Differentiable and Complex Dynamics of Several Variables Pei-Chu Hu, Chung-Chun Yang, 1999-07-31 This book gives a comprehensive and up to date survey on dynamics and related topics such as Fatou Julia type theory the Ergodic theorem and invariant sets hyperbolicity in differentiable or complex dynamics iteration theory on \mathbb{P}^m complex dynamics in \mathbb{C}^m and the foundations of differentiable and complex dynamics The main aims of this volume are firstly to advance the study of the above named topics and to establish the corresponding Fatou Julia results for complex manifolds and secondly to provide some advanced account of dynamical systems within the framework of geometry and analysis presented from a unified approach applicable to both real and complex manifolds Audience This work will be of interest to graduate students and researchers involved in the fields of global analysis analysis on manifolds several complex variables and analytic spaces partial differential equations differential geometry measure and integration

Holomorphic Dynamical Systems Nessim Sibony, Dierk Schleicher, Dinh Tien Cuong, Marco Brunella, Eric Bedford, Marco Abate, 2010-07-31 The theory of holomorphic dynamical systems is a subject of increasing interest in mathematics both for its challenging problems and for its connections with other branches of pure and applied mathematics A holomorphic dynamical system is the datum of a complex variety and a holomorphic object such as a self map or a vector field acting on it The study of a holomorphic dynamical system consists in describing the asymptotic behavior of the system associating it with some invariant objects easy to compute which describe

the dynamics and classify the possible holomorphic dynamical systems supported by a given manifold The behavior of a holomorphic dynamical system is pretty much related to the geometry of the ambient manifold for instance parabolic manifolds do not admit chaotic behavior while projective manifolds have a variety of different chaotic pictures The techniques used to tackle such problems are of various kinds complex analysis methods of real analysis pluripotential theory algebraic geometry differential geometry topology To cover all the possible points of view of the subject in a unique occasion has become almost impossible and the CIME session in Cetraro on Holomorphic Dynamical Systems was not an exception

Value Distribution Theory and Related Topics Grigor A. Barsegian, Ilpo Laine, Chung-Chun Yang, 2006-05-02 The Nevanlinna theory of value distribution of meromorphic functions one of the milestones of complex analysis during the last century was extended to extend the classical results concerning the distribution of entire functions to the more general setting of meromorphic functions Later on a similar reasoning has been applied to algebraic functions subharmonic functions and meromorphic functions on Riemann surfaces as well as to analytic functions of several complex variables holomorphic and meromorphic mappings and to the theory of minimal surfaces Moreover several applications of the theory have been exploited including complex differential and functional equations complex dynamics and Diophantine equations The main emphasis of this collection is to direct attention to a number of recently developed novel ideas and generalizations that relate to the development of value distribution theory and its applications In particular we mean a recent theory that replaces the conventional consideration of counting within a disc by an analysis of their geometric locations Another such example is presented by the generalizations of the second main theorem to higher dimensional cases by using the jet theory Moreover similar ideas apparently may be applied to several related areas as well such as to partial differential equations and to differential geometry Indeed most of these applications go back to the problem of analyzing zeros of certain complex or real functions meaning in fact to investigate level sets or level surfaces

Fractal Geometry and Applications: A Jubilee of Benoit Mandelbrot Michel Laurent Lapidus, Machiel Van Frankenhuysen, 2004 This volume offers an excellent selection of cutting edge articles about fractal geometry covering the great breadth of mathematics and related areas touched by this subject Included are rich survey articles and fine expository papers The high quality contributions to the volume by well known researchers including two articles by Mandelbrot provide a solid cross section of recent research representing the richness and variety of contemporary advances in and around fractal geometry In demonstrating the vitality and diversity of the field

this book will motivate further investigation into the many open problems and inspire future research directions It is suitable for graduate students and researchers interested in fractal geometry and its applications This is a two part volume Part 1 covers analysis number theory and dynamical systems Part 2 multifractals probability and statistical mechanics and applications

The p -Harmonic Equation and Recent Advances in Analysis Pietro Poggi-Corradini,2005 Comprised of papers from the IIIrd Prairie Analysis Seminar held at Kansas State University this book reflects the many directions of current research in harmonic analysis and partial differential equations Included is the work of the distinguished main speaker Tadeusz Iwaniec his invited guests John Lewis and Juan Manfredi and many other leading researchers The main topic is the so called p harmonic equation which is a family of nonlinear partial differential equations generalizing the usual Laplace equation This study of p harmonic equations touches upon many areas of analysis with deep relations to functional analysis potential theory and calculus of variations The material is suitable for graduate students and research mathematicians interested in harmonic analysis and partial differential equations
