Dynamics and Methods of Study of Sedimentary Basins Association des sédimentologues français,1998 This book contains 21 contributions each written by an expert in the area of sedimentary basins The first part of the book is devoted to the methodology used for these studies in particular physical measurements well logging and seismic and synthesis of subsurface data The second part presents specific cases each corresponding to a particular type of basin

Sedimentary Dynamics of Windfield-Source-Basin System Zaixing Jiang,2018-03-06 This book introduces the geological concept of the windfield source basin system based on integrated modern and ancient sedimentology studies It identifies wind field as a main sedimentation controlling factor that combines with provenance and basin dynamics to determine the formation and distribution of depositional systems Using the unary properties of facies sedimentary models and the duality properties of source to sink approaches the concept of a wind source basin system introduces the sedimentary system trinity wind field provenance and basin properties Wind source basin systems provide more plausible genetic interpretations of depositional systems including both continental and marine facies and clastic and carbonate systems as well as more comprehensive and precise predictions of depositional systems hydrocarbon reservoirs in unknown regions Further the book proposes a series of methods on paleowind field reconstruction which fill the gaps in paleo atmospheric field studies in paleoclimatology and shows that allocating relationships among source reservoir cap in petroliferous basins are limited by the wind source basin system This trinity system also provides a new perspective on petroleum geology assessment The book appeals to all those engaged in sedimentology petroleum geology and climatology studies

Dynamics of Hydrocarbon Migration Xiaorong Luo,Likuan Zhang,Yuhong Lei,Wan Yang,2023-03-03 This book presents the authors research findings on the dynamics of oil migration research methodologies insights and applications in petroliferous basins It studies the behaviors of oil migration in porous media through physical experiments and numerical simulations explores the mechanism of oil migration and effects of migration process and then establishes a migration modeling method by coupling the source driving forces and carriers The new method can be used to estimate the amount of migrated hydrocarbons and then predict the location of possible hydrocarbon accumulations in different parts of a basin This approach is useful for resources assessment and prediction of the distribution of hydrocarbon accumulations An example utilizing this methodology is presented to study the dynamics of migration and accumulation processes in the southern slope of Dongying Depression in Bohai Bay Basin in China The book appeals to scientists and professionals working on petroleum prospecting as well as faculty and students in petroleum geology
