When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object's speed and direction will stay the same. This is called Newton's first law of motion.</p> <p>Another way that forces can cause an object to change its motion is by changing its acceleration. Acceleration is the rate at which an object's velocity changes. If an object's acceleration is not zero, its velocity will change. This means that the object's speed or direction will change. This is called Newton's second law of motion.</p> <p>Forces can also cause an object to change its motion by changing its shape. This is called deformation. For example, if you push on a ball, it will change shape. This is because the forces you are applying are not balanced. The forces on one side of the ball are stronger than the forces on the other side.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> <li>What does Newton's first law of motion state?             <ol style="list-style-type: none"> <li>An object at rest will stay at rest.</li> <li>An object in motion will stay in motion.</li> <li>An object's motion will change if a net force acts on it.</li> <li>An object's motion will change if a net force does not act on it.</li> </ol> </li> <li>What does Newton's second law of motion state?             <ol style="list-style-type: none"> <li>Force is equal to mass times acceleration.</li> <li>Force is equal to mass times velocity.</li> <li>Force is equal to mass times distance.</li> <li>Force is equal to mass times time.</li> </ol> </li> <li>What does Newton's third law of motion state?             <ol style="list-style-type: none"> <li>For every action, there is an equal and opposite reaction.</li> <li>For every action, there is a smaller reaction.</li> <li>For every action, there is a larger reaction.</li> <li>For every action, there is no reaction.</li> </ol> </li> <li>What happens when the net force on an object is zero?             <ol style="list-style-type: none"> <li>The object stays still.</li> <li>The object accelerates.</li> <li>The object changes direction.</li> <li>The object continues moving in the same direction.</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
