

The CWEB System of Structured Documentation

by Donald E. Knuth and Silvio Levy (Reading, Massachusetts: Addison-Wesley, 1993),
iv+227pp.
ISBN 0-201-57569-8

The third printing (Spring 2001) has a spiffy new cover and greatly improved pages inside, featuring the latest extensions for hypertext! Look for "Version 3.6" on the cover.

WEB is a software system that facilitates the creation of readable programs. It was originally developed by Donald E. Knuth as he wrote the TeX typesetting system. Users of WEB are able to

- Write programs of superior quality;
- Produce state-of-the-art documentation;
- Greatly reduce debugging time;
- Maintain programs easily as conditions change.

The main idea is to regard a program as a communication to human beings rather than as a set of instructions to a computer. Your program is also viewed as a hypertext document, rather like the World Wide Web. (Indeed, Knuth used the word WEB for this purpose long before CERN grabbed it!)

CWEB is a version of WEB for documenting C, C++, and Java programs. WEB was adapted to C by Silvio Levy in 1987, and since then both Knuth and Levy have revised and enhanced the system in many ways, notably to support C++ and ANSIC. Thus CWEB combines TeX with today's most widely used professional programming languages.

If you are in the software industry and do not use CWEB but your competitors do, your competitors will soon overtake you--and you'll miss out on a lot of fun besides.

More comments about CWEB can be found in [Daniel Mall's website for Literate Programming](#). See also [Leo](#), Edward K. Ream's Python-based outlining-editor/browser compatible with CWEB and other literate programming tools.

This book is the definitive user's guide and reference manual for the CWEB system. The CWEB software itself is freely available via anonymous ftp from `ftp.cs.stanford.edu`, in directory `-ftp/pub/cweb`. It consists of two programs:

CTANGLE

converts a source file `foo.w` to a compilable program file `foo.c`;

CWEAVE

converts a source file `foo.w` to a prettily-printable and cross-indexed document file `foo.tex`.

Both **CTANGLE** and **CWEAVE** are stable, well-tested, and highly portable. They have been installed on a wide variety of computers and operating systems.

Cweb System Of Structured Documentation Version 30:

The CWEB System of Structured Documentation Donald Ervin Knuth, Silvio Levy, 1994 This book describes Knuth's CWEB system, a language designed to produce the best possible documentation for computer programs. Specifically, it describes a version of WEB adapted to the C Programming language by Silvio Levy, combining Knuth's other creation, TEX, with the C language. This title explains what CWEB is and shows how to use it, facilitating a style of programming that will maximize the ability to perceive the structure of complex software and mechanically translate documented programs into a working system that matches the documentation.

Principles of Object-Oriented Modeling and Simulation with Modelica 3.3 Peter Fritzson, 2015-01-06 Fritzson covers the Modelica language in impressive depth, from the basic concepts such as cyber-physical equation-based object-oriented system model and simulation, while also incorporating over a hundred exercises and their solutions for a tutorial, easy-to-read experience. The only book with complete Modelica 3.3 coverage. Over one hundred exercises and solutions. Examines basic concepts such as cyber-physical equation-based object-oriented system model and simulation.

Principles of Object-Oriented Modeling and Simulation with Modelica 2.1 Peter Fritzson, 2010-08-31 Provides an introduction to modern object-oriented design principles and applications for the fast-growing area of modeling and simulation. Covers the topic of multi-domain system modeling and design with applications that have components from several areas. Serves as a reference for the Modelica language as well as a comprehensive overview of application model libraries for a number of application domains.

Adaptive Mesh Refinement - Theory and Applications Tomasz Plewa, Timur Linde, V. Gregory Weirs, 2005-12-20 Advanced numerical simulations that use adaptive mesh refinement (AMR) methods have now become routine in engineering and science. Originally developed for computational fluid dynamics applications, these methods have propagated to fields as diverse as astrophysics, climate modeling, combustion, biophysics, and many others. The underlying physical models and equations used in these disciplines are rather different, yet algorithmic and implementation issues facing practitioners are often remarkably similar. Unfortunately, there has been little effort to review the advances and outstanding issues of adaptive mesh refinement methods across such a variety of fields. This book attempts to bridge this gap. The book presents a collection of papers by experts in the field of AMR who analyze past advances in the field and evaluate the current state of adaptive mesh refinement methods in scientific computing.
