Danube Cyanide Spill:

Danube Nichol Bryan,2004 A tide of death began to flow from the waste pool of a flooded gold mine in Romania on January 30 2000 Deadly cyanide swirled down the Tisza River killing every fish in its path and threatening drinking water supplies Worse yet the poison soon reached the Danube one of Europe s most important rivers Discover what caused this environmental disaster and learn about the chances of similar accidents occurring elsewhere on Earth Book jacket *Cases of Conflict* Allen L. Springer,2016-03-21 *Cases of Conflict* focuses on times of dispute as important moments in the development of international environmental law Conflict tests international law both its content and its relevance become clearer in times of controversy but conflict can also help shape the law Drawing from a growing body of scholarship connecting the fields of international relations and international law *Cases of Conflict* examines six prominent case studies to demonstrate how transboundary disputes have influenced the development of international environmental law and policy Embracing their rich detail and real world messiness this book looks to develop a better understanding of the true content and potential of international environmental law **100 Chemical Myths** Lajos Kovács,Dezső Csupor,Gábor Lente,Tamás Gunda,2014-09-26 *100 Chemical Myths* deals with popular yet largely untrue misconceptions and misunderstandings related to chemistry It contains lucid and concise explanations cut through fallacies and urban legends that are universally relevant to a global audience A wide range of chemical myths are explored in these areas food medicines catastrophes chemicals and environmental problems Connections to popular culture literature movies and cultural history hold the reader s interest whilst key concepts are beautifully annotated with illustrations to facilitate the understanding of unfamiliar material *Chemical Myths Demystified* is pitched to individuals without a formal chemistry background to fledgling undergraduate chemists to seasoned researchers and beyond *Negotiating for Water Resources* Andrea Haefner,2016-10-04 Over 90 per cent of the world population lives in countries that share a river basin with others Freshwater resources are scarce and different nations actors and users compete for limited resources in transboundary river basins often conflicting with each other Water is a resource with no substitute it cannot be secured in sufficiently large quantities through long distance trade deals and due to the interconnectivity of the hydrological system the actions of one country in its water management have a direct bearing on the interests of neighbouring countries For instance in the Mekong River Basin current hydropower and navigation developments in certain countries impact on traditional sources of income such as fisheries and rice production in others These kinds of changes in water use have given rise to conflict between countries in that region and others but have also led in some cases to greater cooperation The past few decades have seen a number of new agreements about the sharing of river resources and cooperation between riparian states *Negotiating for Water Resources* explores the drivers of conflict and cooperation between states in transnational river basins Drawing on extensive fieldwork and interviews on the Mekong Danube and La Plata River Basins the book provides a three level analysis across three case studies including the

regional framework EU ASEAN and Mercosur the River Basin Organisations ICPDR MRC and CIC and the micro level The key question of the book is To what extent do power asymmetries prevent or inhibit cooperation between riparian states over water resources This is linked to the question of how institutions contribute to mitigate competition for natural resources and how states interact in a multilateral arena Overall the book argues that cooperation in transboundary river basins is possible even where there are asymmetric power relations challenging realist assumptions about competition and conflict over resources
