Dutch Elm Disease Research Cellular :

Dutch Elm Disease Research Mariam B. Sticklen, James L. Sherald, 2012-12-06 Dutch elm disease is a significant problem in forestry and horticulture which has proven remarkably difficult to ameliorate. Since the introduction of the Dutch elm disease pathogen to North America, the disease has devastated the elm population of this continent and has been the subject of intensive research. This book summarizes the range of approaches that have been taken to address the disease and emphasizes the significant progress over the past decade in applying methods from cell and molecular biology. Dutch Elm Disease Cellular and Molecular Approaches will be of interest to scientists in plant pathology, horticulture, forestry, biological control, and plant breeding. **Somatic Cell Genetics and Molecular Genetics of Trees** M.R. Ahuja, Wout Boerjan, David B. Neale, 2012-12-06 This proceedings is based on a joint meeting of the two IUFRO International Union of Forestry Research Organizations Working Parties Somatic Cell Genetics S2 04 07 and Molecular Genetics S2 04 06 held in Gent, Belgium, 26-30 September 1995. Although a joint meeting of the two Working Parties had been discussed in the past, this was the first such meeting that became a successful reality. In fact, this meeting provided an excellent forum for discussions and interactions in forest biotechnology that encouraged the participants to vote for a next joint meeting. In the past decade, rapid progress has been made in the somatic cell genetics and molecular genetics of forest trees. In order to cover recent developments in the broad area of biotechnology, the scientific program of the meeting was divided into several sessions. These included somatic embryogenesis, regeneration, transformation, gene expression, molecular markers, genome mapping, and biotic and abiotic stresses. The regeneration of plants produced by organogenesis or somatic embryogenesis is necessary not only for mass cloning of forest trees but also for its application in genetic transformation and molecular biology. Although micropropagation has been achieved from juvenile tissues in a number of forest tree species, in vitro regeneration from mature trees remains a challenging problem in most hardwoods and conifers. The mechanisms involved in the transition from juvenile to mature phase in woody plants are poorly understood. This transition can now be investigated at the molecular level. **The Elms** C.P. Dunn, 2012-12-06 Elms occur both naturally and cultivated throughout much of the temperate world. Because of their high tolerance to extreme growing conditions and their widespread distribution, elms have been widely planted in cities, towns, and rural areas throughout North America and northern Europe. As such, their current demise due to several pandemics of Dutch elm disease has spurred a huge body of research on breeding for disease resistance, conservation, and systematics. **The Elms: Breeding, Conservation, and Disease Management** provides the current state of knowledge in these areas and is an important reference work for pathologists, breeders, taxonomists, and arborists. **Biology of the Fungal Cell** Richard J. Howard, Neil A.R. Gow, 2013-03-09 **Biology of the Fungal Cell** offers a select sampling of current knowledge and direction of fundamental research into the cellular structure, morphogenesis, and development of fungi. Topics range from the mechanisms of invasive growth and controls of polarity to the nature of extracellular matrices and the various

connections through the cell wall to the cytoskeleton and beyond The fungal cell is considered in the context of colony formation as well as from a molecular point of view from signal transduction to the vast tubular matrix that comprises the vacuole system with an over riding emphasis on biology The volume concludes with a forward looking consideration of genomics as perhaps the most powerful tool available for studies of the fungal cell Each chapter some lavishly illustrated authored by highly respected scientists in the field offers an in depth review of the subject that is key to a basic understanding on how these organisms develop as cells colonies and pathogens

Urban Forests Jill Jonnes, 2017-09-05 Far ranging and deeply researched Urban Forests reveals the beauty and significance of the trees around us Elizabeth Kolbert Pulitzer Prize winning author of *The Sixth Extinction* Jonnes extols the many contributions that trees make to city life and celebrates the men and women who stood up for America s city trees over the past two centuries An authoritative account Gerard Helferich *The Wall Street Journal* We all know that trees can make streets look prettier But in her new book *Urban Forests* Jill Jonnes explains how they make them safer as well Sara Begley *Time Magazine* A celebration of urban trees and the Americans presidents plant explorers visionaries citizen activists scientists nurserymen and tree nerds whose arboreal passions have shaped and ornamented the nation s cities from Jefferson s day to the present As nature s largest and longest lived creations trees play an extraordinarily important role in our cities they are living landmarks that define space cool the air soothe our psyches and connect us to nature and our past Today four fifths of Americans live in or near urban areas surrounded by millions of trees of hundreds of different species Despite their ubiquity and familiarity most of us take trees for granted and know little of their fascinating natural history or remarkable civic virtues Jill Jonnes s *Urban Forests* tells the captivating stories of the founding mothers and fathers of urban forestry in addition to those arboreal advocates presently using the latest technologies to illuminate the value of trees to public health and to our urban infrastructure The book examines such questions as the character of American urban forests and the effect that tree rich landscaping might have on commerce crime and human well being For amateur botanists urbanists environmentalists and policymakers *Urban Forests* will be a revelation of one of the greatest most productive and most beautiful of our natural resources
