**Stability of Dynamical Systems** Anthony N. Michel,Ling Hou,Derong Liu,2015-03-30 The second edition of this textbook provides a single source for the analysis of system models represented by continuous time and discrete time finite dimensional and infinite dimensional and continuous and discontinuous dynamical systems For these system models it presents results which comprise the classical Lyapunov stability theory involving monotonic Lyapunov functions as well as corresponding contemporary stability results involving non monotonic Lyapunov functions Specific examples from several diverse areas are given to demonstrate the applicability of the developed theory to many important classes of systems including digital control systems nonlinear regulator systems pulse width modulated feedback control systems and artificial neural networks The authors cover the following four general topics Representation and modeling of dynamical systems of the types described above Presentation of Lyapunov and Lagrange stability theory for dynamical systems defined on general metric spaces involving monotonic and non monotonic Lyapunov functions Specialization of this stability theory to finite dimensional dynamical systems Specialization of this stability theory to infinite dimensional dynamical systems Replete with examples and requiring only a basic knowledge of linear algebra analysis and differential equations this book can be used as a textbook for graduate courses in stability theory of dynamical systems It may also serve as a self study reference for graduate students researchers and practitioners in applied mathematics engineering computer science economics and the physical and life sciences Review of the First Edition The authors have done an excellent job maintaining the rigor of the presentation and in providing standalone statements for diverse types of systems This is a very interesting book which complements the existing
