

How to find Action/Reaction forces based on Newton's 3rd Law.

(i) find acc of system

$$F = ma$$

$$21 = (2+5)a$$

$$a = 3\text{m/s}^2$$

(ii) find the force which A exerts on B?

Cal. the force which A exerts on B. (in terms of F)

$$F = ma$$

$$F = (2+8)a$$

$$a = \frac{F}{10}$$

eg. How to calculate Action/Reaction forces in case of free falling bodies.

Cal. the force which A exerts on B?

Note: In case of free fall action/reaction forces will be zero (0N) ($m \cdot g$)

Dynamics Of Action:

Dynamics in Action Alicia Juarrero, 2002-01-25 What is the difference between a wink and a blink The answer is important not only to philosophers of mind for significant moral and legal consequences rest on the distinction between voluntary and involuntary behavior However action theory the branch of philosophy that has traditionally articulated the boundaries between action and non action and between voluntary and involuntary behavior has been unable to account for the difference Alicia Juarrero argues that a mistaken 350 year old model of cause and explanation one that takes all causes to be of the push pull efficient cause sort and all explanation to be prooflike underlies contemporary theories of action Juarrero then proposes a new framework for conceptualizing causes based on complex adaptive systems Thinking of causes as dynamical constraints makes bottom up and top down causal relations including those involving intentional causes suddenly tractable A different logic for explaining actions as historical narrative not inference follows if one adopts this novel approach to long standing questions of action and responsibility

Magnetohydrodynamics and Fluid Dynamics: Action Principles and Conservation Laws Gary Webb, 2018-02-05 This text focuses on conservation laws in magnetohydrodynamics gasdynamics and hydrodynamics A grasp of new conservation laws is essential in fusion and space plasmas as well as in geophysical fluid dynamics they can be used to test numerical codes or to reveal new aspects of the underlying physics e g by identifying the time history of the fluid elements as an important key to understanding fluid vorticity or in investigating the stability of steady flows The ten Galilean Lie point symmetries of the fundamental action discussed in this book give rise to the conservation of energy momentum angular momentum and center of mass conservation laws via Noether's first theorem The advected invariants are related to fluid relabeling symmetries so called diffeomorphisms associated with the Lagrangian map and are obtained by applying the Euler Poincare approach to Noether's second theorem The book discusses several variants of helicity including kinetic helicity cross helicity magnetic helicity Ertels theorem and potential vorticity the Hollman invariant and the Godbillon Vey invariant The book develops the non canonical Hamiltonian approach to MHD using the non canonical Poisson bracket while also refining the multisymplectic approach to ideal MHD and obtaining novel nonlocal conservation laws It also briefly discusses Anco and Bluman's direct method for deriving conservation laws A range of examples is used to illustrate topological invariants in MHD and fluid dynamics including the Hopf invariant the Calugareanu invariant the Taylor magnetic helicity reconnection hypothesis for magnetic fields in highly conducting plasmas and the magnetic helicity of Alfvén simple waves MHD topological solitons and the Parker Archimedean spiral magnetic field The Lagrangian map is used to obtain a class of solutions for incompressible MHD The Aharonov Bohm interpretation of magnetic helicity and cross helicity is discussed In closing examples of magnetosonic N waves are used to illustrate the role of the wave number and group velocity concepts for MHD waves This self contained and pedagogical guide to the fundamentals will benefit postgraduate level newcomers and seasoned
